BI Developer| Data Analyst with over 5 years of experience architecting scalable, end-to-end Power BI and Azure-based analytics solutions across healthcare, retail, and manufacturing. Proven track record cutting manual reporting effort by 50%, improving report performance by 40%, and enabling self-service, AI-augmented insights for enterprise stakeholders. Strong foundation in exploratory data analysis, and advanced SQL to validate accuracy, uncover root causes, and transform complex, multi-source datasets into reliable, decision-ready insights that drive business outcomes.

SKILLS

Business Intelligence & Visualization: Power BI (Desktop & Service), Tableau, Self-Service BI
Languages: SQL, Python (Pandas, NumPy), DAX, Power Query
Databases: Microsoft SQL Server, PostgreSQL
Data Modeling: Dimensional Modeling, Star Schema, Fact & Dimension Tables, Semantic Models
Cloud & Data Platforms: Microsoft Azure, Microsoft Fabric, Snowflake, Databricks
ETL / ELT: Azure Data Factory, Power Query, Data Extraction, Data Transformation, Data Pipelines
Methodologies: Exploratory Data Analysis (EDA), Data Profiling, Statistical Analysis, Ad-hoc Reporting, KPI Tracking, Root Cause Analysis, Data Validation
AI & Automation: Claude AI, MCP Server, Copilot (Power BI), Natural-Language Querying, Agentic Workflows, Automated Insight Generation
Governance & Delivery: Row-Level Security (RLS), Data Governance, Data Quality, UAT, Agile / Scrum, JIRA

PROFESSIONAL EXPERIENCE

Wilsonart *December 2024 – Present*
Role: *Business Intelligence Developer* *Oak Brook, IL*

- **Designed and Developed end-to-end Power BI solutions** sourcing data from SQL Server, Oracle EBS, and Excel - from extraction and semantic model development through UAT and automated delivery of 15+ dashboards - cutting manual reporting effort by 50% for business stakeholders.
- Collaborated with business users, supply-chain and sales stakeholders to define and track 20+ KPIs in Power BI using DAX, building dashboards on Fabric-hosted datasets that reduced reporting turnaround by 30% for leadership decision-making.
- Built the Medallion architecture on Microsoft Fabric using **Azure Data Factory** to ingest data from 5+ source systems, cutting data-preparation time by 35% and improving dataset reliability for downstream reporting.
- Developed complex **SQL queries, stored procedures, and views** to extract and transform data from multiple databases while maintaining **data accuracy, consistency, and integrity**.
- Optimized 10+ Power BI reports by designing reusable dataflows, enabling query folding, applying star-schema modeling, reducing model cardinality, and tuning DAX measures - improving report load times by 40%.
- Implemented incremental refresh strategies for datasets exceeding 5M+ rows, reducing refresh time by 60% and lowering Power BI Premium capacity usage.
- Designed static and dynamic Row Level Security (RLS) across 15+ Power BI reports serving 100+ business users, enforcing role-based data access and strengthening compliance with data governance standards.
- Acted as a subject-matter expert (SME) for Power BI within the organization, mentoring junior consultants and leading knowledge-sharing initiatives that boosted team productivity.
- Integrated **Claude AI** via MCP Server and leveraged **Copilot** in Power BI to enable natural-language querying, automated DAX generation, and insight generation from Power BI datasets - reducing time-to-insight and accelerating stakeholder-ready reporting.
- Built dashboards tracking inventory levels, stock-outs, and replenishment cycles across 5+ warehouses, giving supply chain teams real-time visibility that reduced stock-out incidents by 80%.
- Used **DAX Studio and Power BI Performance Analyzer** to identify performance bottlenecks and improve dashboard loading and query response times.

Davita Kidney Care *June 2024 – November 2024*
Role: *Power BI Developer* *Chicago, IL*

- Analyzed **EHR** data from clinical systems and built **10+ interactive Power BI dashboards** visualizing patient visit histories, medication administration records, vital signs, and lab results, improving care-coordination visibility.
- Designed and optimized 20+ **SQL** queries, stored procedures, CTEs, and views in PostgreSQL, applying indexing and query optimization techniques to support data extraction, transformation, and reporting with faster, more reliable delivery for stakeholders.
- Improved data-processing efficiency 30% through Exploratory data analysis, data profiling, and statistical validation in Python (Pandas) and advanced Excel (Power Pivot, XLOOKUP, INDEX MATCH, pivot tables, array formulas), strengthening data integrity across clinical reporting.
- Troubleshot and resolved data quality, performance, and usability issues across Power BI reports and PostgreSQL queries, applying root cause analysis and data validation checks to improve dashboard reliability.
- Created **ad-hoc reports and self-service analytics solutions** that enabled business users to analyze operational data and answer business questions with minimal technical support.
- Oversaw **Power BI Service** operations - establishing automated workflows and data governance frameworks to ensure seamless data accessibility and reporting reliability for clinical teams.

Cognizant Technology Solutions INC *January 2021 – December 2022*
Role: *Data Engineer* *Bangalore*

- Built and managed **ETL pipelines** with Keystone and SQL to extract inventory data from **SAP ERP** and load it into **Snowflake**, ensuring data accuracy and boosting pipeline efficiency by 30%.
- Developed **SQL queries** using joins and subqueries to retrieve data from the databases, enhancing data accessibility for analytical reporting.
- **Reduced data-retrieval time by 25%** by applying dimensional modeling to design and optimize star schemas in Snowflake, unifying inventory data across warehouse locations to support analytical reporting.
- Created **50+ custom SQL queries** in MySQL Workbench, delivering clean datasets sourced from SAP ERP and other systems that powered Tableau dashboards and reduced data-preparation time.
- Designed **Tableau reports,** enabling end users to quickly access information with on-demand filters and replacing multi-day manual reporting cycles.
- Delivered business intelligence projects in an Agile/Scrum environment using JIRA, partnering cross-functionally on requirements gathering and UAT to shorten reporting turnaround by several days.

Sunshine Technology *September 2019 – August 2020*
Role: *Software Engineer* *Hyderabad*

- Collected and analyzed Oracle DB data through statistical analysis and data profiling to assess data distribution and quality, categorizing tables into fact and dimension tables to build a basic data model.
- Responsible for designing reports and dashboards to visualize retail KPIs like Net Profit Margin, Sell Through rate, and Conversion rate - enabling business teams to use the reports in decision making.
- Documented OBIEE data source connections, transformation logic, and report specifications for technical handoff.

EDUCATION

University of Cincinnati, Master of Science, Information Technology | Cincinnati, OH | May 2024
Courses: SQL, Grad Topics in IT, Advanced Algorithms, Advanced Storage Technologies, Cybersecurity, Power BI

PROJECT

VeraScope - https://ankithavenkannagari.github.io/

- Built an AI agent that connects directly to the enterprise data warehouse to answer ad-hoc business questions on demand - eliminating the wait for analyst-driven queries and cutting reporting turnaround from days to hours.
- Engineered guardrails into the analysis process - automated data-quality checks and output validation before any result is reported - so leadership gets self-service answers they can trust.

CERTIFICATIONS Credly

Microsoft Certified: Azure AI Fundamentals (AI-901)
