

Ankitha Venkannagari
Data Analyst | Data Engineer

Phone: 513-399-7954

ankithareddy.venkannagari@gmail.com | [Portfolio](#) | [LinkedIn](#)

Data Analyst/ Data Engineer with 5+ years of experience converting complex, raw data into actionable insights that drive strategic decision-making across multiple industries. Specialize in architecting scalable **ETL** pipelines and data warehouses using dimensional modeling (**star schema**) to deliver trustworthy KPIs through **Power BI** and **Tableau** dashboards. Leverage **SQL**, **Power Query**, and **DAX** to build robust analytics solutions on **Azure**, implementing data quality frameworks, governance protocols, and performance optimization throughout the data lifecycle. Excel at bridging technical execution and business strategy—partnering with stakeholders to decode complex requirements into measurable outcomes that enable data-driven decision-making.

TECHNICAL SKILLS:

Programming & Query Languages	SQL, DAX, Python
Databases	PostgreSQL, Microsoft SQL Server
Cloud Platforms	Microsoft Azure, Oracle Cloud
Business Intelligence & Visualization	Power BI, OBIEE, Tableau
ETL	Azure Data Factory, Power Query, Oracle Data Integrator
Data Warehousing & Big Data	Databricks, Microsoft Fabric, Snowflake
Data Analysis Libraries	PySpark, Pandas, NumPy, Statistical Analysis, Matplotlib
Development Tools	Copilot, Visual Studio, Sandbox, AI
Project Management & Collaboration	Jira, Agile – Scrum, MS - Excel
Professional Skills	Stakeholder Engagement, Requirement Gathering

WORK EXPERIENCE

Company: Maxil Technology Solutions Inc

Dec 2024 – Till Date

Role: Data Analyst

Chicago, IL

Description: The project is about consolidating and analyzing fragmented job platform data from multiple sources using Power BI to improve recruitment performance metrics and optimizing operational strategy for talent acquisition.

- Designed and implemented **Power BI** solutions from data extraction to automated dashboard delivery, reducing manual reporting efforts by 50%.
- Orchestrated data pipelines with **ADF** to ingest raw data into **Lakehouse**, establishing a reliable and scalable data foundation.
- Transformed raw data into a refined, analytics-ready state by implementing incremental ETL processes and data quality checks using **Azure Data Factory**, **PySpark** and **Fabric**.
- Built the lakehouse's **Medallion** architecture, processing data through bronze, silver, and gold layers to deliver clean, high-value datasets.
- Partnered with senior leadership and cross-functional teams to define **KPIs** and translate requirements into **Star schema** data models and interactive dashboards, accelerating decision-making by 40%
- Optimized Power BI dashboards by refining **DAX** queries and implementing best practices in data modelling, improving report load times by 40%.
- Created and managed **Row-level security** for Users and Groups in **Power BI Desktop** and Power BI Service which ensured data access compliance and protected sensitive information.
- Managed **Power BI Service** by monitoring Fabric **metrics**, configuring refresh schedules, creating apps, deploying pipelines, and performing unit testing - improving report reliability by 30%, reducing refresh failures by 40%, and ensuring 100% compliance with security standards.
- Designed and deployed interactive **dashboards** with advanced visualizations, enabling users to track KPIs and trends in real-time, improving operational efficiency.
- Maintained and updated existing reports and dashboards to reflect changing business needs and data-source updates, keeping stakeholders informed and supporting timely decisions.

Company: Davita Kidney Care

June 2024 – Nov 2024

Role: Data Analyst

Chicago, IL

Description: The project is about automating the collection and analysis of patient data from multiple sources using Power BI to improve monitoring and decision-making in kidney dialysis operations.

- Analyzed **EHR** data from clinical system to create interactive **Power BI** dashboards that visualized patient visit histories, medication administration records, vital signs and laboratory results to improve care coordination and clinical compliance monitoring.
- Performed **EDA** and **Data Profiling** using Excel functions (pivot tables, VLOOKUP, advanced formulas) resulting in a 30% improvement in data processing efficiency.
- Defined, developed and implemented data models to generate meaningful insights and delivered 10+ self-service analytical data visualizations to the business users using Power BI reports.
- Improved reporting system by generating monthly reports, communicating business insights, and using BI software to identify trends and opportunities.
- Created dynamic **DAX** calculations and custom measures in Power BI to deliver business intelligence metrics, improving report usability by structuring data models with calculated columns and concealing technical fields from end-user views.
- Gathered **business requirements** and collaborated with business teams to enhance data infrastructure, enabling more reliable pipelines and scalable reporting solutions.
- Oversaw **Power BI Service** operations like establishing automated workflows and governance frameworks to ensure seamless data accessibility and reporting reliability.

Company: Cognizant Technology Solutions

Jan 2021 – Dec 2022

Role: Data Engineer

Bangalore, India

Description: The project is about integrating and transforming inventory data from multiple warehouse locations to enhance demand forecasting and support proactive restocking decisions for Apple's mobile division.

- Built and managed **ETL** pipelines with **Keystone** and **SQL** to load data into **Snowflake**, ensuring accuracy and boosting efficiency by 30%.
- Developed **SQL queries** using joins, sub queries and correlated sub queries to retrieve data from the database, enhancing data accessibility for reporting.
- Developed and optimized star schemas in **Snowflake** to support analytical reporting, enabling 25% faster data retrieval and insights.
- Created 50+ custom SQL queries in **MySQL Workbench**, delivering clean data sets that powered Tableau dashboards and reduced data-preparation time.
- Developed interactive dashboards in **Tableau Desktop** and published them on **Tableau Server**, enabling end users to quickly access and understand data with on-demand filters
- Participated in team sprints and collaborated with business teams to deliver on business intelligence Projects that shortened reporting turnaround by several days.
- Tested new and upgraded Tableau 2022.3 features (visualizations, data blending, parallelized dashboards, hyperlink objects) to confirm compatibility and improve dashboard performance.

Company: Sunshine Technology

Sep 2019 – August 2020

Role: Jr. Software Engineer

Hyderabad, India

Description: The project is about collecting and reviewing sales and customer information from multiple stores to spot trends and support smarter decision-making for a retail client.

- Assisted in designing **OBIEE** dashboards to visualize retail KPIs like operating margin, sell-through rate, and basket affinity and enabling stakeholders to identify growth opportunities and optimize pricing strategies.
- Built SQL scripts for extracting data from **Oracle DB Server** for inventory turnover analysis, reducing query runtime and accelerating weekly sales reporting.
- Collaborated with cross-functional teams to gather business requirements, translate them into technical specifications, and deliver data-driven solutions aligned with organizational goals.

EDUCATION

University of Cincinnati, Master of Science, Information Technology | Cincinnati, OH | May 2024

Courses: SQL, Grad Topics in IT, Advance Algorithms, Advanced Storage Technologies, Cybersecurity, Power BI
