

Results-driven **Data Analyst** and **Power BI Developer** with 5+ years of experience transforming complex data into decision-ready insights across multiple industries. Recognized for end-to-end ownership of **Power BI** solutions—from Medallion **lakehouse** architecture and **Star Schema** data models, **DAX**-optimized measures, and governed, role-secured dashboards that have cut manual reporting by 50% and accelerated executive decision-making by 40%. Skilled in translating ambiguous stakeholder requirements into measurable KPIs using **SQL**, **Power Query**, and **Excel** on **Azure** and **Fabric**, with a track record of delivering scalable **ETL** pipelines and self-service analytics that generate lasting operational value.

TECHNICAL SKILLS:

Business Intelligence & Visualization	Power BI (Desktop, Service), Tableau
Programming & Query Languages	SQL, DAX, Python
Databases	PostgreSQL, Microsoft SQL Server, MySQL
Cloud Platforms	Microsoft Azure, Oracle Cloud
ETL	Azure Data Factory, Power Query
Data Warehousing & Big Data	Microsoft Fabric, Snowflake
Data Analysis Libraries	PySpark, Pandas, NumPy, Statistical Analysis, Matplotlib
Project Management & Collaboration	Jira, Agile/Scrum, Microsoft Excel, Stakeholder Engagement

WORK EXPERIENCE

Company: Maxil Technology Solutions Inc

Role: Data Analyst

Description: The project is about analysing and consolidating fragmented recruitment platform data using Power BI into a governed reporting ecosystem, enabling senior leadership to track talent-acquisition KPIs in real time.

Dec 2024 – Till Date

Chicago, IL

- Designed and implemented end-to-end Power BI solutions - from data extraction and semantic model development to automated dashboard delivery - cutting manual reporting effort by 50%.
- Orchestrated data pipelines with Azure Data Factory to ingest raw recruitment data into a Lakehouse, establishing a reliable and scalable data foundation for Power BI reporting.
- Transformed raw data into an analytics-ready state by implementing incremental ETL processes and data quality checks using ADF, PySpark, and Microsoft Fabric, ensuring high-quality datasets powering downstream reports.
- Built the Medallion architecture (Bronze -> Silver -> Gold) on Microsoft Fabric, delivering clean, high-value datasets ready for Power BI consumption.
- Accelerated executive decision-making by 40% by partnering with senior leadership to define KPIs, translating requirements into Star Schema data models and publishing interactive Power BI dashboards highlighting hiring trends and pipeline health.
- Optimized Power BI report performance by refining DAX queries and applying data modelling best practices, improving report load times by 40%.
- Created and managed Row-Level Security for users and groups in Power BI Desktop and Power BI Service, ensuring data-access compliance and protecting sensitive recruitment information.
- Improved report reliability by 30% and reduced refresh failures by 40% by managing Power BI Service operations: Fabric metrics monitoring, refresh schedules, app deployment pipelines, and unit testing—achieving 100% compliance with security standards.
- Designed and deployed interactive dashboards with advanced visualizations, enabling stakeholders to track KPIs and recruitment trends in real time, improving operational efficiency.
- Maintained and updated existing Power BI reports and dashboards to reflect changing business requirements and data-source updates, keeping stakeholders informed and supporting timely decisions.
- Integrating Claude AI through MCP Server to enable natural-language querying and automated insight generation from Power BI datasets, accelerating stakeholder-ready reporting and reducing time-to-insight across recruitment analytics.

Company: Davita Kidney Care

June 2024 – Nov 2024

Role: Data Analyst

Chicago, IL

Description: The project is about automating the collection and analysis of patient data from multiple sources using Power BI to improve monitoring and decision-making in kidney dialysis operations.

- Analyzed **EHR** data from clinical systems and built **10+ interactive Power BI dashboards** visualizing patient visit histories, medication administration records, vital signs, and lab results, improving care-coordination visibility and clinical compliance monitoring.
- **Improved data-processing efficiency by 30%** through systematic EDA and data profiling—applying advanced Excel functions (pivot tables, VLOOKUP, advanced formulas) and data-quality checks that standardized fragmented clinical data across sources.
- Defined, developed, and implemented **Power BI data models** to generate meaningful clinical insights and delivered 10+ self-service analytical visualizations to business users, enabling on-demand access to operational KPIs.
- Improved the reporting system by generating monthly reports and using Power BI to identify trends and opportunities, communicating actionable business insights to clinical and operational leadership.
- Created dynamic **DAX** calculations and custom measures in Power BI to deliver BI metrics, improving report usability by structuring data models with calculated columns and concealing technical fields from end-user views.
- Gathered **business requirements** and collaborated with clinical teams to enhance data infrastructure, enabling more reliable pipelines and scalable Power BI reporting solutions.
- Oversaw **Power BI Service** operations—establishing automated workflows and governance frameworks to ensure seamless data accessibility and reporting reliability for clinical teams.

Company: Cognizant Technology Solutions

Jan 2021 – Dec 2022

Role: Data Engineer

Bangalore, India

Description: The project is about integrating and transforming inventory data from multiple warehouse locations to enhance demand forecasting and support proactive restocking decisions for Apple's mobile division.

- Built and managed **ETL pipelines** with Keystone and SQL to load inventory data into **Snowflake**, ensuring data accuracy and boosting pipeline efficiency by 30%.
- Developed **SQL queries** using joins, subqueries, and correlated subqueries to retrieve data from the database, enhancing data accessibility for analytical reporting.
- **Reduced data-retrieval time by 25%** by designing and optimizing star schemas in Snowflake that unified inventory data across warehouse locations to support analytical reporting.
- Created **50+ custom SQL queries** in MySQL Workbench, delivering clean datasets that powered Tableau dashboards and reduced data-preparation time.
- Authored 50+ optimized SQL queries and published **Tableau dashboards** to Tableau Server, enabling end users to quickly access data with on-demand filters and replacing multi-day manual reporting cycles.
- Participated in team sprints and collaborated with business teams to deliver business intelligence projects that shortened reporting turnaround by several days.
- Tested new and upgraded **Tableau 2022.3 features** (visualizations, data blending, parallelized dashboards, hyperlink objects) to confirm compatibility and improve dashboard performance.

Company: Sunshine Technology

Sep 2019 – August 2020

Role: Jr. Software Engineer

Hyderabad, India

Description: The project is about collecting and reviewing sales and customer information from multiple stores to spot trends and support smarter decision-making for a retail client.

- Assisted in designing **OBIEE** dashboards to visualize retail KPIs like operating margin, sell-through rate, and basket affinity and enabling stakeholders to identify growth opportunities and optimize pricing strategies.
- Built SQL scripts for extracting data from **Oracle DB Server** for inventory turnover analysis, reducing query runtime and accelerating weekly sales reporting.
- Collaborated with cross-functional teams to gather business requirements, translate them into technical specifications, and deliver data-driven solutions aligned with organizational goals.

EDUCATION

University of Cincinnati, Master of Science, Information Technology | Cincinnati, OH | May 2024

Relevant Courses: SQL, Grad Topics in IT, Advance Algorithms, Advanced Storage Technologies, Cybersecurity, Power BI
